When smarter chemistry matters

Your Quick Guide to Water Care Solutions

Your Partner in Water Management

Specialising in providing high-quality water treatment chemicals designed for safe, effective, and compliant water management. From local councils and water treatment facilities to commercial pools and spas, we're proud to support a wide range of industries with reliable, Australian-made solutions.

Our Watercare range includes flocculants, acid-based products, sanitisers, and balancers, all formulated to maintain clean, clear, and safe water across various systems. Whether you're managing large-scale municipal water treatment, industrial recycling systems, or leisure facilities, our products help ensure optimal performance and water quality.

We also offer a complete range of pool and spa chemicals to keep recreational water sparkling and hygienic, supported by our expert knowledge and tailored advice.

Partner with Nowchem for smarter, safer water care — backed by local support, custom dosing solutions, and decades of industry experience.

Acid Products

Hydrochloric Acid

Used widely in water treatment as an effective neutralization agent for alkaline (high pH) effluent and water bodies such as swimming pools.

Phosphoric Acid 85%

Can be used as a cleaner, and a reagent, for rust conversion and is good at converting Iron Oxide into Ferric Phosphate.

Sulphuric Acid

Primarily used as pH balancing agents and also for CIP and membrane cleaning in the water treatment process.

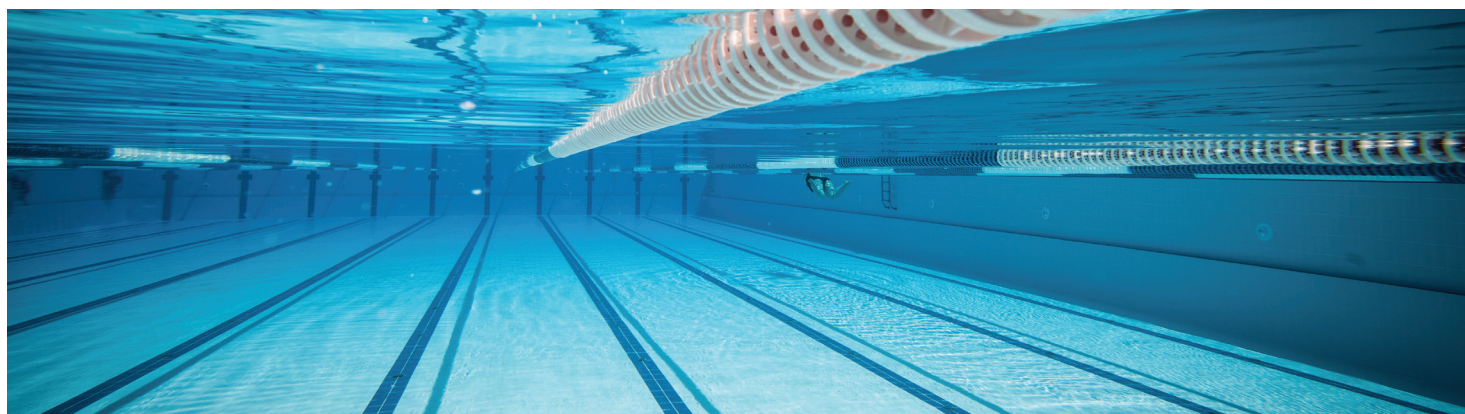

Citric Acid

Commonly used in the water treatment industry as a membrane cleaner. It is a very mild acid that passivates steel very slowly and lightly descales particles on various surfaces.

Acetic Acid

An organic compound commonly used in the Waste Water Treatment Process and is utilised in some treatment plants for Biological Nutrient Removal.

Flocculants

Aluminium Sulphate

A liquid flocculant commonly used for the treatment of municipal water and wastewater systems.

Poly Aluminium Chloride

Poly Aluminium Chloride is a coagulant of 83% basicity. It is safe for use in all waters and works well through a variety of temperatures and pH levels.

Sanitisers & Balancers

Sodium Hypochlorite

Used extensively in domestic and commercial cleaning products and in water treatment applications.

Liquid Pool Chlorine

Liquid pool chlorine is used for swimming pools and water treatment applications. Contains 12.5% Sodium Hypochlorite.

Sodium Carbonate Dense Soda Ash

A common alkali powder that can be blended quite easily into a solution. Ideal for pH correction and increasing alkalinity.

Sodium Hydroxide - Liquid Caustic Soda

A reagent for a large number of applications. Used in a broad range of industries including food and beverages manufacturing, pharmaceuticals, mining and water treatment.

Caustic Soda Granular

Used for various applications including cleaning, pH adjustment, unblocking drains and a wide variety of water treatment applications.

Sodium Bicarbonate

A common powder that is mostly added to large volumes of water for minor pH adjustment (increase) with ease.

Magnesium Hydroxide

Used in treating industrial metal-laden acidic waste water.

Pool & Spa

Calcium Chloride

Calcium chloride is an ionic compound of calcium and chlorine. It is highly soluble in water and it is used for increasing alkalinity in pools.

Algicide

Great for the prevention and removal of algae-based growths in swimming pools. Ideal for winterising your swimming pool to prevent algae and mould spots.

Calcium Hypochlorite

Granular Pool Chlorine provides easy powder-based chlorination for swimming pools.

Chlorine Tablets

Provide a consistent dose of chlorine and are ideal in many applications as this limits the amount of dosing required.

Spa Bromine Sanitiser Tablets

A stable sanitiser in warm conditions. Ideal for spa water greater than 26°C.

Spa Bath Cleaner

An alkaline low foaming concentrated sanitising formula designed to clean and sanitise interior spa baths. Designed for internal spas or external, when changing water.

Isocyanuric Acid - Stabiliser

Also referred to as sunblock or stabiliser for outdoor swimming pools, forms a weak bond with free chlorine in the pool water, protecting it from the sun's ultraviolet rays to reduce chlorine loss.

Sodium Bisulphate (Dry Acid)

A granular powder that is highly effective at lowering alkalinity levels and reducing pH levels in swimming pools.

Swimming Pool Salt

Available for those pools which run salt water chlorination systems where electrolysis generates chlorine from salt.
